

Parametrix specializes in automated pumping and process control applications. We assist clients with electrical, instrumentation, and controls design for processes such as oil and gas, pulp and paper, lumber, water treatment, and drinking water systems. Our SCADA services group includes engineers, senior design specialists, and Wonderware® ArchestrA certified field technicians who provide technical consultation and implementation services ranging from complete system upgrades to minor maintenance modifications.

### On-call Services

Parametrix offers on-call support contracts for prompt service of small issues such as system service problems, PLC and HMI programming, and equipment troubleshooting. As an integrated part of our client's team, we provide peace of mind for management through timely response when needed while limiting expenses.

### Communications, Telemetry and Radio Systems

Our telemetry experience includes the use of spectrum radio, microwave, fiber-optic cable, wireless (WiFi), secure internet, dial-up modems, auto-dialers, and dedicated phone lines. We perform radio studies, technical support, and troubleshooting. Our services offer complete integration of software, hardware, and information technology.

### Custom Solutions

Parametrix assists clients with everything from automated system reporting for regulatory compliance, operator training, to standby power. Project delivery methods range from traditional design-bid to turn-key solutions in partnership with panel fabricators.

*Our engineers and technicians are specialists in their field. They understand your need to provide continuous service to your customers.*
